

# **Are You Looking for an Environmental Consultant?**

## **MPA/MACS Members Who Are Qualified Consultants/Certified Professionals**

Following the recent reforms to Part 213, the part of Michigan laws dealing with the cleanup of underground storage tanks, the old QC/CP "licensing" program housed in the Department of Environmental Quality was discontinued. To prevent unqualified persons or companies from illegally doing UST cleanup work, there were certain requirements left in the law.

This list has been compiled from information provided by MPA/MACS members in response to a survey we sent to them. This information has been self reported and should help you decide who you would like to consider doing business with. The complete section of the law is as follows:

### **NATURAL RESOURCES AND ENVIRONMENTAL PROTECTION ACT (EXCERPT)**

#### **Act 451 of 1994 -- 324.21325 Qualified underground tank consultant; requirements.**

Sec. 21325. A person shall be considered a qualified underground storage tank consultant if the person meets all of the following requirements:

(a) Experience in all phases of underground storage tank work, including tank removal oversight, site assessment, soil removal, feasibility, design, remedial system installation, remediation management activities, and site closure and possesses or employs at least 1 of the following:

(i) A professional engineer license with 3 or more years of relevant corrective action experience, preferably involving underground storage tanks.

(ii) A professional geologist certification or a similar approved designation such as a professional hydrologist or a certified groundwater professional, with 3 or more years of relevant corrective action experience, preferably involving underground storage tanks.

(iii) A person with a master's degree from an accredited institution of higher education in a discipline of engineering or science and 8 years of full-time relevant experience or a person with a baccalaureate degree from an accredited institution of higher education in a discipline of engineering or science and 10 years of full-time relevant experience. This experience shall be documented with professional and personal references, past employment references and histories, and documentation that all requirements of the occupational safety and health act of 1970, Public Law 91-596, 84 Stat. 1590, and regulations promulgated under that act, and the Michigan occupational safety and health act, 1974 PA 154, MCL 408.1001 to 408.1094, and rules promulgated under that act have been met.

(iv) A person that was certified by the department as an underground storage tank professional pursuant to section 21543 at the time of the effective date of the amendatory act that added this subparagraph.

(b) The person has all of the following insurance policies written by carriers authorized to write such business, or approved as an eligible surplus lines insurer, by the state and which are placed with an insurer listed in a.m. best's with a rating of no less than B+ VII:

(i) Worker's compensation insurance.

(ii) Professional liability errors and omissions insurance. This policy may not exclude bodily injury, property damage, or claims arising out of pollution for environmental work and shall be issued with a limit of not less than \$1,000,000.00 per occurrence.

(iii) Contractor pollution liability insurance with limits of not less than \$1,000,000.00 per occurrence, if not included under the professional liability errors and omissions insurance required under subparagraph (ii). The insurance requirement under this subparagraph is not required for consultants who do not perform contracting functions.

(iv) Commercial general liability insurance with limits of not less than \$1,000,000.00 per occurrence and \$2,000,000.00 aggregate.

(v) Automobile liability insurance with limits of not less than \$1,000,000.00 per occurrence.

(c) Has demonstrated compliance with the occupational safety and health act of 1970, Public Law 91-596, 84 Stat. 1590, and the regulations promulgated under that act, and the Michigan occupational safety and health act, 1974 PA 154, MCL 408.1001 to 408.1094, and the rules promulgated under that act, and is able to demonstrate that all such rules and regulations have been complied with during the person's previous corrective action activity.

**History:** Add. 2012, Act 108, Imd. Eff. May 1, 2012.

*\*Note that it is not necessary for a company to employ a properly credentialed engineer and a properly credentialed geologist and that their insurance coverage cannot be less than \$1,000,000 per occurrence. We believe the following information is accurate as possible.*

MSG is a leading environmental consulting firm in the Midwest. We conduct site investigation, remediation, and vapor intrusion pathway evaluations for Part 201, and 213 sites throughout Michigan. MSG can provide design-build remediation solutions for UST system removals to federal, state and municipal clients, as well as private commercial and industrial clients. Our talented group of geoenvironmental professionals perform environmental investigations, compliance evaluations, and remediation services. We conduct s evaluation and design installation of mitigation systems, assist with operation and maintenance of existing UST's, and self-perform excavation activities.
